

Tuberose Absolute India

Polianthes tuberosa L.

Floral
Animalic

Botanical family : Amaryllidaceae
Method of culture : Conventional
Part harvested : Flowers

CAS TSCA : 8024-05-3
INCI : Polianthes tuberosa extract

Specifications

Method for obtaining : Ethanolic extraction of the concrete
:
Appearance : Dark orange yellow viscous liquid
Constituents : Trans-methyl eugenol, palmitic acid, benzyl benzoate, methyl salicylate

Harvest period

J F M A M J **J A S** O N D

Our 100% pure and natural tuberose absolute comes from polyanthes tuberosa. Tuberose is widely cultivated in southern India, like jasmine. At the end its long, erect stem, the tuberose, polyanthes tuberosa in Latin, bears delicate, white, star-shaped flowers, evenly clustered, releasing one of the most captivating fragrances in the plant world. The flower of sweethearts, illicit lovers, and newlyweds, it leaves in its wake a heady, unquestionably seductive fragrance. Native to Mexico, the first tuberose bulbs were imported in 1530 by a French missionary, who is said to have secretly planted them in a monastery garden near Toulon. The tuberose then spread throughout Provence and the plant is still found there. Today, tuberose is grown extensively in southern India, which boasts an ideal climate for the plant.

Advised uses : Aromatherapy, Perfumery, Cosmetic
