

Jasmine grandiflorum India

Jasminum grandiflorum

ABSOLUTE

ALBERT VIEILLE ADDED VALUE

For more than 10 years we have been collaborating with our partner committed in the field to improve the situation of the harvesters and in favour of the environment with, in particular, the manufacture of vermicomposters. We purchase concrete which is then transformed into absolute in our facilities in Seville. It takes nearly 6 million flowers to make 1 kg of jasmine grandiflorum absolute.

ABOUT JASMINE GRANDIFLORUM

Jasminum grandiflorum is a shrub with dark-green foliage festooned with magnificent white flowers. Native to India, *Jasminum grandiflorum* was imported into Europe in the 16th century. It is now mainly grown in India and Egypt, representing around 95% of world production.

In India, jasmine flower is sacred. That is why the first harvest is kept as an offering to the gods. The second is used to make necklaces, put in hair or in houses. Only the flowers from the third harvest will be used to produce the jasmine concrete.

Jasminum grandiflorum begins producing in its third year, and jasmine plants will be left in the ground until they reach 10 years of age. Jasmine is a nocturnal flower that blooms and releases its scent at night. The flowers are hand-picked, one by one, during the first hours of the day.

GLOBAL DATA

CAS TSCA: 8022-96-6
CAS EINECS: 84776-64-7
EINECS : 283-993-5
FEMA: 2598
FDA: 182.200
CoE: 245n
INCI: Jasminum grandiflorum flower extract

Resource: Cultivated
Processed plant part: Flowers

Transformation process: Ethanolic extraction of the concrete

Appearance: Orange to reddish-brown liquid
Main constituents: Benzyl acetate, benzyl benzoate, phytol

Active constituents: Esters (benzyl salicylate, geranyl benzoate, benzyl benzoate)
