*Rosa centifolia*

## ORGANIC FLORAL WATER

### ALBERT VIEILLE ADDED VALUE

To ensure the sustainability of the supply chain, we collaborate directly with several farmers and structure all our agricultural partnerships through multi-year contracts that bind us reciprocally on a volume, quality and fair price defined by mutual agreement. From culture to distillation, our teams provide field support to our agricultural partners through training and the transfer of know-how. Inter-producer meetings are organized so that everyone can improve their skills.

Our organic roses are grown using natural care, without chemical fertilizers or pesticides. We work to maintain a living soil and a wide biodiversity.

In order to provide support to farmers wishing to convert to distillation, to understand the costs and techniques and to guarantee the products' quality, we have developed a mobile distillation unit. Our mobile distillery is a 100% French-made tool, from design to manufacture, custom-built and certified organic. It allows, since 2017, to distil our roses as close as possible to the fields.

### ABOUT ROSA CENTIFOLIA

Having arrived in Europe in the late 16th century, this flower so emblematic of the perfume industry, alongside jasmine and iris, has brought worldwide fame to Grasse. The May rose, is a symbol of Grasse's agricultural heritage. It is this unique terroir between the mountains and the sea that gives this flower its fragrance, so prized by perfumers. There are two species of rose used in perfumery: the May rose or Rosa centifolia, and the Damask rose, from which essential oil or absolute is extracted.

The flowers are hand-gathered in May, when just opened. To preserve their scent and the flowers' integrity, the harvest takes place dawn, before the heat of the day.
