CAS TSCA : 949495-68-5  
INCI : Schinus terebinthifolia fruit extract

## Specifications

Method for obtaining : Extraction with CO2

Appearance : Colourless limpid liquid, eventually slightly yellow

Constituents : Alpha-phellandrene, alpha-pinene, Limonene, germacrene D

## Harvest period

J F M A **M J** J A S O N D

Our 100% pure and natural CO2 extract of pink peppercorn is produced from *Schinus terebinthifolius* from Réunion Island. *Schinus terebinthifolius* is often confused with a similar species, *Schinus molle*, which is native to South America.

Native to the Indian Ocean region, the false pepper plant or *Schinus terebinthifolius* is a small tree with a dense, drooping appearance. The delicately scented flowers form hanging clusters that produce the peppercorns or drupes. These drupes exude a spicy, peppery, woody smell characteristic of pink peppercorn. It is often confused with a similar species, *Schinus molle*, which is native to South America.

Advised uses : Perfumery, Cosmetic
